6 Design of marine structures 778 CIRIA C683 6.1 RUBBLE MOUND BREAKWATERS 6.1.1 General aspects This section describes the general considerations for the structural design of rubble mound breakwaters. It includes discussion of (composite) caisson breakwaters where these are founded on rubble foundations.

includes the shape of the structure with the various materials used with their dimensions and layer thickness. This chapter deals first with the functional design of coastal structures and the various types that exist. The geometrical design of seawalls/dikes and of breakwaters is then treated separately and more in depth.

Dam, for instance, is a type of hydraulic structure used to hold water in a reservoir as potential energy, just as a weir is a type of hydraulic structure which can be used to pool water for irrigation, establish control of the bed (grade control) or, as a new innovative technique, to divert flow away from eroding banks or into diversion ...
