Random, or statistical, errors, can be both determined and reduced at the expense of repeating the measurement many times. This will not work at all with errors which are systematic. In high-precision measurements, accurate knowledge of systematic errors requires a profound understanding of the instruments and the procedures for using them.

To make significant improvements in aviation maintenance error, we must thoroughly analyze the major accidents. Fortunately, major accidents are extremely rare events. However, this low accident rate poses a new problem. There is simply not enough information available from major accidents to conduct an effective trend analysis.
