## **Introduction to Probability**

Solution to Problem 1.14. (a) Each possible outcome has probability  $1/36$ . There are 6 possible outcomes that are doubles, so the probability of doubles is  $6/36 = 1/6$ . (b) The conditioning event (sum is 4 or less) consists of the 6 outcomes  $(1;1);(1;2);(1;3);(2;1);(2;2);(3;1)$ ; 2 of which are doubles, so the conditional probability of doubles is  $2/6 = 1/3$ .

## **Introduction to Probability 2nd Edition Problem Solutions**

Introduction to Probability, Second Edition, discusses probability theory in a mathematically rigorous, yet accessible way. This one-semester basic probability textbook explains important concepts of probability while providing useful exercises and examples of real world applications for students to consider.

Introduction to Probability Math 30530 Section 01 Fall 2013 Probability deals with occurrences that have some degree of randomness in their outcomes; in other words, just about everything, from calculating how likely it is that you win the lottery, to estimating how much longer until your computer's hard-drive goes kaput.
