This free online textbook (e-book in webspoken) is a course in basic analysis. This book started its life as my lecture notes for Math 444 at the University of Illinois at Urbana-Champaign (UIUC) in the fall semester of 2009, and was later enhanced to teach Math 521 at University of Wisconsin-Madison (UW-Madison). A prerequisite for the course is a basic proof course.

In mathematics, real analysis is the branch of mathematical analysis that studies the behavior of real numbers, sequences and series of real numbers, and real-valued functions. Some particular properties of real-valued sequences and functions that real analysis studies include convergence, limits, continuity, smoothness, differentiability and integrability.

Based on a new classification of algorithm design techniques and a clear delineation of analysis methods, Introduction to the Design and Analysis of Algorithms presents the subject in a coherent and innovative manner. Written in a student-friendly style, the book emphasizes the understanding of ideas over excessively formal treatment while thoroughly covering the material required in an ...

Introduction to Mediation, Moderation, and Conditional Process Analysis describes the foundation of mediation and moderation analysis as well as their analytical integration in the form of "conditional process analysis", with a focus on PROCESS version 3 for SPSS and SAS (#processmacro) as the tool for implementing the methods discussed. Available as both an e-book and in print form, it is ...

In 2006, I produced Introduction to Economic Analysis, a free, open sourced, creative-commons-licensed textbook spanning introductory and intermediate microeconomics. There were few adoptions. That there were several high profile adoptions like NYU and Harvard convinced me that the lack of adoptions was not due to the material itself, or even my exposition of the material, but instead to two ...

1. INTRODUCTION 1.1 A short introduction to Social Network Analysis. A network is made of two components : a list of the actors composing the network, and a list of the relations (the interactions between actors).As part of a mathematical object, actors will then be called vertices (nodes, in Gephi), and relations will be denoted as tiles (edges, in Gephi).

Mathematical analysis is the branch of mathematics dealing with limits and related theories, such as differentiation, integration, measure, infinite series, and analytic functions.. These theories are usually studied in the context of real and complex numbers and functions. Analysis evolved from calculus, which involves the elementary concepts and techniques of analysis.
