1 Introduction Topology is simply geometry rendered exible. In geometry and analysis, we have the notion of a metric space, with distances specified between points. But if we wish, for example, to classify surfaces or knots, we want to think of the objects as rubbery. Examples. For a topologist, all triangles are the same, and they are all the

General Topology. The goal of this part of the book is to teach the language of mathematics. More specifically, one of its most important components: the language of set-theoretic topology, which treats the basic notions related to continuity. The term general topology means: this is the topology that
