

### **laser surface engineering processes pdf**

History. In 1965, the first production laser cutting machine was used to drill holes in diamond dies. This machine was made by the Western Electric Engineering Research Center. In 1967, the British pioneered laser-assisted oxygen jet cutting for metals. In the early 1970s, this technology was put into production to cut titanium for aerospace applications.

The tensile specimens used in this study were traditional tensile  $\alpha$ -dog-bones,  $\alpha$  contoured to dimensions consistent with ASTM Standard E8-09 as shown in the drawing in Fig. 1a. With laser sintering, AlSi10Mg and Ti6Al4V specimens were produced in both horizontal (specimens on edge) and vertical orientations (specimens standing on end).

Stereolithography (SLA) SLA uses a build platform submerged into a translucent tank filled with liquid photopolymer resin. Once the build platform is submerged, a single point laser located inside the machine maps a cross-sectional area (layer) of a design through the bottom of the tank solidifying the material.
