A software system is a system on intercommunicating components based on software forming part of a computer system (a combination of hardware and software). It "consists of a number of separate programs, configuration files, which are used to set up these programs, system documentation, which describes the structure of the system, and user documentation, which explains how to use the system".

Software engineering
Software engineering is the application of engineering to software development. It involves the analysis of user requirements, the design of software systems, the development of software code, and the testing and maintenance of software systems. Software engineering is a multidisciplinary field that draws on principles from computer science, electrical engineering, and systems engineering. It is a critical component of modern technology development, ensuring that software systems are reliable, secure, and meet the needs of their users.
