1.1 Principal Bundles in Topology Let  $G$  be a topological group. That is,  $G$  is a topological space equipped with continuous maps  $G \times G \rightarrow G$  (the group operation), a distinguished point  $1 \in G$  (the identity), and a map  $G \rightarrow G$  (the inverse) satisfying the standard associativity, identity, and inverse axioms. Definition 1.1.

THE METHODS OF ALGEBRAIC TOPOLOGY FROM THE VIEWPOINT OF COBORDISM THEORY S. P. NOVIKOV Abstract. The goal of this work is the construction of the analogue to the Adams spectral sequence in cobordism theory, calculation of the ring of co-homology operations in this theory, and also a number of applications: to

set topological nature that arise in algebraic topology. Since this is a textbook on algebraic topology, details involving point-set topology are often treated lightly or skipped entirely in the body of the text. Not included in this book is the important but somewhat more sophisticated topic of spectral sequences.
