Each of the identities stated above is one of a pair of identities such that each can be transformed into the other by interchanging  $\hat{a}$  and  $\hat{c}$ , and also  $\tilde{A}$  and  $U$ . These are examples of an extremely important and powerful property of set algebra, namely, the principle of duality for sets, which asserts that for any true statement about sets, the dual statement obtained by interchanging ...

Relational algebra, first created by Edgar F. Codd while at IBM, is a family of algebras with a well-founded semantics used for modelling the data stored in relational databases, and defining queries on it.. The main application of relational algebra is providing a theoretical foundation for relational databases, particularly query languages for such databases, chief among which is SQL
