The G is the universal gravitational constant. Although, as far as I know, and I'm not an expert on this, I actually think its measurement can change. It's not truly, truly a constant, or I guess when on different scales, it can be a little bit different.

Introduction to Newton's law of gravitation (video) | Khan

Composition of the Universal Relation Johan H astad Avi Wigdersony Abstract We prove that the communication complexity of the k-fold composition of the universal relation on n bits is $(1 + o(1))kn$ when $k = o(p/n) = o(\log n)$. 1 Introduction Does $NC^1 = P$? If so, as most people believe, what are the inherently sequential functions

Composition of the Universal Relation

The capital G is known as the constant of universal gravitation. That is the number we need to know in order to calculate the gravitational attraction between, say, two spheres of 1 kilogram each. Unlike the attraction of the Earth, which has a huge mass M, such a force is quite small, and the number G is likewise very, very small.
